

## MR-Mammography Intervention Coil System ***MICS-INTERVENTION AID***

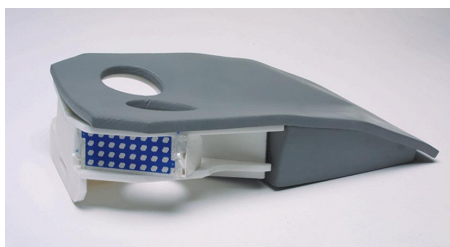

### Description

The ***MR-Mammography Intervention Aid*** basically consists of a transparent acrylic plate containing about 600 puncture holes of 4 mm in diameter, held in a frame containing a set of MR fiducial markers.

The device can easily and firmly be attached to the *Bilateral Open Breast Coil*, thereby positioning and mild compressing the breast against a Breast Support Pad. Due to the open design of the *Bilateral Open Breast Coil*, the ***MR-Mammography Intervention Aid*** can be placed and fixated in multiple positions.

### Applications

Localization wires as well as biopsy guns can be used.

Design and specifications subject to change without notice.  
Doc. #4-50-322-MIA

### System/Accessories

- + The device comes with a (blue) Sliding Locator Plate for easy eye-retrieval of the software established puncture hole.
- + Detachable Fiducial Marker Plate
- + Sterile Needle Guide in four sizes (12G, 14G, 16G, 18G)
- + Breast Support Pad Holder
- + Breast Support Pad Insert
- + Breastpositioning/ Compression Device

### Approvals
