MCU docking port

The recommended procedure to construct the MCU docking station is as detailed below:

1. Remove the MCU docking port components from their transit packaging.
2. Screw the docking arms (1) onto the threaded studs located on the MCU docking plate (2) and hand tighten.
3. Secure to the surface by an appropriate method; adhesive, Velcro, screws etc. Mounting holes (3) are provided to assist this process.
4. If required two extra docking arms are supplied in order to use the MCU docking port at an angle. These are attached by screwing two M6 × 12 mm screws (4) (supplied) through the top two mounting holes (3).
5. Locate the docking port onto the required surface ensuring that the plate is positioned in a way that the MCU does not fall out of its holding position due to gravity.

- 1 - MCU docking arms
- 2 - MCU docking plate
- 3 - Mounting holes
- 4 - M6 × 12 mm screws
